

WHAT IS CLAIMED IS:

✓ 1. An information processing device comprising:
sound signal obtaining means for obtaining a sound signal;
sound signal analyzing means for frequency-analyzing said
obtained sound signal;
frequency-analyzed picture producing means for producing a
specified frequency-analyzed picture on the basis of a result of
said frequency-analysis;
selected picture switching means that switches and selects one
among a plurality of registered pictures as a selected picture on
the basis of a level of said obtained sound signal; and
composed picture display means that displays a composed
picture produced by composing said frequency-analyzed picture and
said selected picture.

2. The information processing device according to claim 1,
wherein
said composed picture display means produces said composed
picture by logically operating a picture element of said
frequency-analyzed picture and a corresponding picture element of
said selected picture.

3. The information processing device according to claim 1,
wherein

DOCUMENT EDITION

said composed picture display means changes a composing method of said frequency-analyzed picture and said selected picture on the basis of a level of said obtained sound signal.

4. The information processing device according to claim 2,
wherein

said composed picture display means changes a composing method of said frequency-analyzed picture and said selected picture on the basis of a level of said obtained sound signal.

5. An information processing device comprising:
sound signal obtaining means for obtaining a sound signal taken in from a microphone;
sound signal analyzing means for frequency-analyzing said obtained sound signal;
frequency-analyzed picture producing means for producing a specified frequency-analyzed picture on the basis of a result of said frequency-analysis;
storing means for storing a plurality of pictures;
selected picture switching means that switches and selects one among a plurality of said registered pictures as a selected picture on the basis of a level of said obtained sound signal; and
composed picture display means that displays a composed picture produced by composing said frequency-analyzed picture and said selected picture.

0000000000000000

6. The information processing device according to claim 5,
wherein

 said composed picture display means produces said composed
picture by logically operating a picture element of said
frequency-analyzed picture and a corresponding picture element of
said selected picture.

7. The information processing device according to claim 5,
wherein

 said composed picture display means changes a composing method
of said frequency-analyzed picture and said selected picture on
the basis of a level of said obtained sound signal.

8. The information processing device according to claim 6,
wherein

 said composed picture display means changes a composing method
of said frequency-analyzed picture and said selected picture on
the basis of a level of said obtained sound signal.

9. A picture producing method comprising the steps of:
 obtaining a sound signal;
 frequency-analyzing said obtained sound signal;
 producing a specified frequency-analyzed picture on the basis
of a result of said frequency-analysis;

switching and selecting one among a plurality of registered pictures as a selected picture on the basis of a level of said obtained sound signal; and

displaying a composed picture produced by composing said frequency-analyzed picture and said selected picture.

10. The picture producing method according to claim 9, wherein said step of displaying a composed picture produces said composed picture by logically operating a picture element of said frequency-analyzed picture and a corresponding picture element of said selected picture.

11. The picture producing method according to claim 9, wherein said step of displaying a composed picture changes a composing method of said frequency-analyzed picture and said selected picture on the basis of a level of said obtained sound signal.

12. The picture producing method according to claim 10, wherein said step of displaying a composed picture changes a composing method of said frequency-analyzed picture and said selected picture on the basis of a level of said obtained sound signal.

13. A program storing medium that makes an information processing device execute a program, said medium comprising the steps of:
obtaining a sound signal;

frequency-analyzing said obtained sound signal;
producing a specified frequency-analyzed picture on the basis
of a result of said frequency-analysis;

switching and selecting one among a plurality of registered
pictures as a selected picture on the basis of a level of said
obtained sound signal; and

displaying a composed picture produces by composing said
frequency-analyzed picture and said selected picture.

14. The program storing medium according to claim 13, wherein
said step of displaying a composed picture produces said
composed picture by logically operating a picture element of said
frequency-analyzed picture and a corresponding picture element of
said selected picture.

15. The program storing medium according to claim 13, wherein
said step of displaying a composed picture changes a composing
method of said frequency-analyzed picture and said selected
picture on the basis of a level of said obtained sound signal.
